## Lost wax casting

Lost wax casting Introduction :

We are specialized in manufacturing and exporting various kinds of lost wax castings in material of carbon steel , alloy steel , ductile iron and with annual production capacity 16,000 tons. Our products widely used in industries of automobile, marine, valve and pipe fittings, construction engineering, earth moving (mining machinery) , power transmission line etc.

## What is "Lost Wax" Investment Casting?

Lost wax casting is an advanced metalforming process used to produce metal parts in high quality, functionality and cost-effectiveness.

Lost wax casting process is a one-to-one process in which one disposable pattern produces one metal part. When combined with modern production knowledge and technologies, it can be applied to produce parts of varying degrees of complexity, in virtually any volume and for the broadest possible spectrum of applications.

A highly versatile casting process, lost wax casting has for some time been perceived as a comparatively expensive process. But when compared to alternative processes which require extensive welding or machining, an investment cast component can often dramatically reduce overall part production costs. Of course, investment casting is not the appropriate process for every metal part requirement. However, for many challenging part applications, investment casting offers a proven and cost-effective metalforming solution.
